

NDT VT

(visual testing)

What's included with the service?

As part of our visual inspection (VT) service, we provide a comprehensive assessment of the technical condition of components and professional documentation confirming the inspection results. The scope of the service includes:

- Visual inspection of welds, steel structures, pipelines, tanks, and other components in accordance with applicable standards and technical documentation.
- Detection of surface imperfections, such as cracks, undercuts, overflows, pitting, corrosion, deformation, and other visible defects.
- Assessment of the quality of welded joints and compliance with design requirements and acceptance criteria.
- Detailed inspection report, including a description of the inspection scope, inspection results, detected imperfections, and photographic documentation (if required).
- Recommendations for further action, including the need for repairs, additional NDT testing, or approval of the component for further use.
- Tests performed by certified personnel in accordance with the requirements of standards, procedures, and technical inspection regulations.

Visual inspections enable the rapid detection of irregularities during production, assembly, or operation, reducing repair costs, increasing safety, and ensuring high-quality workmanship of inspected components.
